GET THE WATER OUT! USE CIM-TEK'S TANK DRYER

Central Illinois Manufacturing Company's (Cim-Tek® Filtration) Research and Development Department has developed a water absorbing product called the Tank Dryer for use with fuel storage tanks. The Tank Dryer contains a proprietary super-absorbent polymer that absorbs free water at the bottom of tanks containing diesel, biodiesel, fuel oil, and gasoline. It is designed with a clamp for the fill hole and a string for lowering the unit to rest at the bottom of the tank. It is easy to use, inexpensive, and helps to prevent downtime caused by water contamination. Take care of the problem before it starts...use the Cim-Tek® Tank Dryer.

For literature and technical information, call 888.898.7187.
