## **CIMTEK'S 5 MICRON HIGH ALCOHOL FILTERS FOR E85 EXCLUSIVELY MEET NREL & UL STANDARDS**

According to the NREL (National Renewable Energy Laboratory) and Underwriters Laboratories (UL®), Central Illinois Manufacturing Company's (CIM-TEK®) high alcohol filters (Bio-tek®BHA series) meet current requirements for dispenser pumps using Ethanol-blended gasoline up to and including 85%. The NREL encourages all fuel dispenser owners with an interest in establishing E85 fueling systems to engage professional support during installation to ensure fuel integrity and system compatibility by using a 5 micron filter. Now, station owners will be able to complete their systems with a NREL recommended 5 micron specified fuel filter that currently, is the only UL® recognized (Bio-tek®) filter designed for blends up to E85.

For literature and technical information, call 888.898.7187.
