## **NEW TANK SAMPLER KIT FOR FUEL STORAGE TANKS**

Central Illinois Manufacturing Company (Cim-Tek® Filtration) has developed an innovative way to take more accurate samples from the bottom of fuel storage tanks with its **New** product, the **Tank Sampler Kit**. It is a portable hand-operated vacuum device designed for use on underground and above-ground tanks storing gasoline, diesel fuels, alcohol-blended fuels, as well as fuel oil tanks. With this product, samples of the fuel will be more accurate than using water-finding paste. The sample containers can be taken to a lab for the identification of other contaminants such as microbiological growths or particulates.

The Tank Sampler Kit (Part #60035) contains a 6' & 14' polyurethane suction hose with brass weights so samples can be taken directly from the tank bottom for a more precise reading. It is equipped with 3 shatterproof containers in a metal holder, which keeps test samples from spilling. All components are placed in a portable case that is easy to store. Begin taking samples that you can rely on with the Cim-Tek® Tank Sampler Kit.
