

BIO-TEK®

RENEWABLE FUEL FILTER TECHNOLOGY

FILTRATION PRODUCTS DESIGNED FOR BIO-FUELS
Protect Your Customers. Dispense Clean Bio-Fuel.

Cleaner burning. Less dependence on foreign oil. Lower overall cost. Supports America's economy.

There are many reasons consumers, transportation companies, fleets and farmers are using more and more bio-fuels such as E10, E15, E85, B2, B5, B10 and B100. It just makes sense. But along with all of the benefits of switching to bio-fuels there are some challenges. By its very nature, bio-fuel is a very aggressive cleaning agent and requires special dispensing equipment to prevent damage to engines. As the bio-fuel cleans storage tanks, hoses, piping, etc., a special dispenser filter is needed to prevent the released contaminants from migrating into an engine.

Cim-Tek® Filtration has taken fuel filtration to the next level in its Bio-Tek® Line of products. Bio-Tek® combines all of the state-of-the-art advances in fluid filtration to offer:

- Bio-Tek® exclusive Progressive Density® 2 micron filtration
- 3–4 times longer filter life due to higher dirt holding capacity
- Models to detect Phase Separation and Water in the fuel
- Unique Pre-Lubed gaskets...reduces installation time
- Dispenser & Pump Filters available for all bio-fuels
