

HYDROBURN®

Gasoline Treatment

FOR USE WITH UNDERGROUND & ABOVE
GROUND TANKS, ENGINES & EQUIPMENT

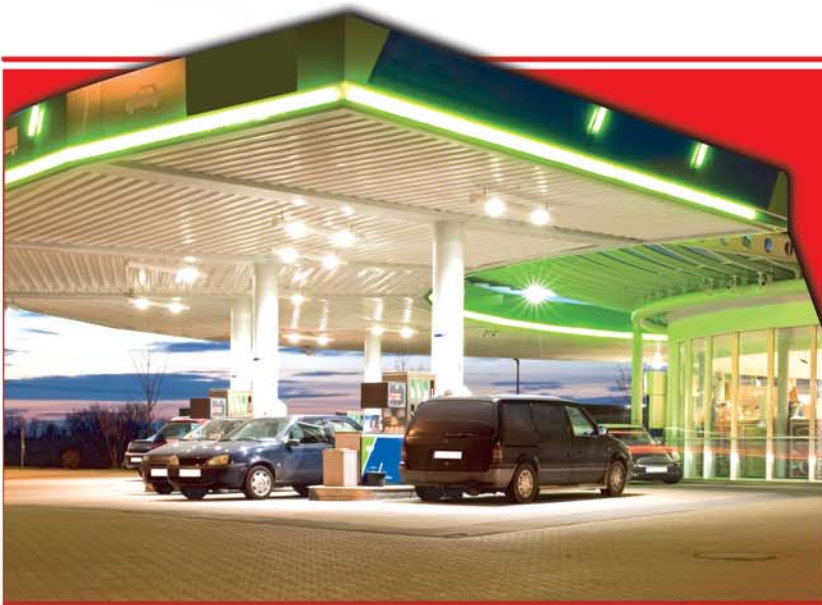

Eliminate Water in Gasoline & Ethanol Blends!

Water, the worst contaminate in all fuels, builds up in every fuel tank every day through condensation. Water reduces the heat of combustion which means more smoke, less power, hard starting, rough idle, poor mileage, winter freeze-ups and microbe growth. Hydroburn treatments, which are complex organic compounds, have a strong attraction to water. Hydroburn seeks out water droplets, breaks the bond between adjacent water molecules, and bonds itself to the individual molecule. The water and Hydroburn molecules become a combustible compound that liberates the water molecule as steam in the exhaust. When the fuel is agitated the combustible compounded water molecules are dispersed throughout the entire fuel tank as an emulsion. Over time the water is removed as the engine runs, "burning" it off.

- **Hydroburn®** eliminates water and water-related problems when applied correctly!! Period.
- **Hydroburn®** prevents and **REVERSES PHASE SEPARATION** (Patent Pending) in E-10 Fuel...See how it works!
<http://www.youtube.com/watch?v=XIjQdR-avdM>
- **Hydroburn®** improves fuel quality and promotes more complete combustion.

HYDROBURN fuel treatment is scientifically formulated to break the weak hydrogen bond between water molecules...and then becomes a combustible compound that liberates the water molecule as steam in the exhaust.

**REVERSE
PHASE SEPARATION
IN ETHANOL BLENDED FUEL**
(Patent Pending)

- **Hydroburn®** restores phase separated fuel to previous ethanol amount & octane rating
- We guarantee **Hydroburn®** to be compatible with all **Cim-Tek®** filters.
(We cannot guarantee compatibility with other brands of filters.)
